Position Applied For: Full Stack Engineer

Summary

I am an ICT professional with a goal-orientated passion for software engineering and a career span over 8 years' experience in solutions development. I have had an opportunity to work on numerous telecommunication solution projects for Pulse Contact Solutions, with Momentum (member of MMI Holdings Limited) as a client. Introduced and created a User Acceptance Testing document, currently in use, which helps change management in troubleshooting and tracking systems modifications. The document was widely adopted across MMI Holdings Limited with business satisfaction levels being high. Provided solutions for customized Medical Aid Gap Cover Systems with programming code and QA testing of Gap Cover to existing systems with end users to provide training for them. I strive to look for better innovative approaches to solving problems in their domain using my software engineering skills. I look forward to working with a passionate team of professionals that are diverse and are goal orientated.
